

ADAM O'NEILL

SOFTWARE ENGINEER

CONTACT:

adamaoneill@gmail.com

07 450 707645

EDUCATION:

MASTERS OF SCIENCE IN DATA ANALYTICS

University of Portsmouth

Graduated: July, 2023 (First class)

BACHELOR OF SCIENCE IN MATHEMATICS & PHYSICS

University of Portsmouth

Graduated: July, 2021 (First Class)

SKILLS:

- Java (Spring boot)
- Typescript (Angular)
- Javascript (React/React Native)
- Python (Fastapi)
- Docker
- Github/Git/Gitlab
- SQL
- MongoDB
- HTML/CSS
- Google Cloud Platform

LANGUAGES:

English (**Native Proficiency**)

Arabic (**Conversational**)

PROFESSIONAL SUMMARY:

Software Engineer with 3+ years of experience specializing in full-stack development. Proven ability to build and maintain enterprise-level applications for the insurance industry using Angular, Spring Boot, and Docker. Holds a First Class MSc in both Data Analytics and BSc in Mathematics & Physics, combining strong analytical problem-solving with hands-on software development expertise.

WORK EXPERIENCE:

Software Engineer

IQUO Ltd, Portsmouth, Hampshire (Years: 2023 - Present)

- Built full-stack insurance apps for major clients (HSBC, Aviva, First Direct).
- Spearheaded development of key components for the HSBC admin portal. Built core features for the Angular frontend and Spring Boot backend.
- Implemented secure user management and authentication flows using Keycloak. Protected admin routes and managed role-based user permissions.
- Containerized applications using Docker to streamline development and deployment.
- Collaborated with a large, distributed team using GitLab for version control. Thrived in a high-autonomy Agile setting, taking full ownership of features.

Freelance Software Engineer

Remote (Years: 2025 - Present)

- Delivered customer-facing landing page for a car rental client.
- Engineered a modern UI using Angular, focusing on performance and reusability.
- Configured a CI/CD pipeline on GCP to enable continuous deployments.
- Implemented a dynamic localization (i18n) feature to provide multi-language support for a global user base.

Junior Software Engineer

ThoughtRiver, Cambridge (Years: 2022 - 2022)

- Constructed a backend API for a new user manager using the FastAPI framework.
- Used SQLAlchemy ORM to build and manage a database for web application data.
- Utilised Git and JIRA for version control and task management in a collaborative environment.
- Implemented an authentication login flow to secure the website.

Python Developer

Transparency Task Force, Portsmouth, Hampshire (Years 2021-2022)

- Started in an admin role. Using python I started automating my own role.
- This then developed to becoming the sole python developer in the organisation.
- Automated further processes outside of my administrative role.
- Significantly improved overall efficiency of the administration team.

Projects:

Workout Planning App

- Currently developing a cross-platform mobile application for tracking workouts and fitness progress.
- Engineered a component-based, reusable UI with React Native for a consistent cross-platform user experience.
- Implemented app-wide navigation using React Navigation and managed global state (e.g., user profile, current workout) with Context API.
- Designing the supporting Spring Boot RESTful API and database schema to handle user authentication and workout data.

Chess Web Application (Python, in progress)

- Designed and developed a UI for a chess board using raw HTML and CSS
- Created a minimax algorithm within the page to analyse a position from a strategic perspective and recommend the best move.
- Developed a neural network to also analyse a position from a positional perspective and also recommend the best move
- Using chess.com historical games created a database that can return the best historical move if a position exists in a database and some statistics..
- The final engine uses a combination of the previous 3 methods to find the best move.
- Future plans to add the logic into a fastapi endpoint and deploy the project.

Betting Arbitrage Filter (Python, complete)

- Engineered an automated data-scraping tool using Python and Selenium to aggregate real-time odds from multiple web sources
- Implemented a data analysis engine with Pandas to instantly filter, compare, and identify profitable arbitrage opportunities.
- Successfully designed and deployed the tool, which identified and actioned on opportunities to generate profit.
